## RedHorse Systems Version 9.4 Enhances Communication with Google Gmail

RedHorse adds the most secure method to connect to Google Gmail for retrieving and sending email.

**La Quinta, CA, 10/14/2020**

RedHorse Systems today announced that Version 9.4 of its RedHorse CRM software will extend its integration to Google Gmail.

Email providers are continuing to improve their security and providing these more secure connections to developers who work with the platforms. Google is encouraging developers to connect to its servers with modern OAuth connections which are more secure than POP and IMAP.

RedHorse has long supported 2-factor authentication with POP and IMAP and now adds a direct connection to Gmail using their recommended OAuth2 method.

“Email is a target for hacking, so offering users the ability to use the most secure method available is very important to us,” said Connie Koch, RedHorse Systems founder and lead developer. “Not only is it more secure than traditional methods, it is super fast.”
